## Tools/Products

### Torus

The Torus Unified High Productivity Low Code Platform follows a model driven approach for building and extending, integrating and deploying rich cloud-based applications rapidly. The platform is built on third generation technologies with internet scalability with time and cost advantage. Features include:

- Enhanced UI capability for both internal and partner teams (able to offload white labeling or customization of UI elements)
- Jumpstarting a DevOps capability without needing to set up build and deployment controls for UI components
- Visibility of data models and logic flows, improving documentation of applications
- Good set of tools for building and managing stateful workflows / transactions

### MOWEDE (LogiGear)

#### WEB DEVELOPMENT

MOWEDE is a web development company with experience in building web applications. Our dedicated web app developers have successfully completed many projects for a variety of business domains.

We create adaptive, responsive, websites with a UI/UX interface that can handle high-traffic volume, and be customized to ensure lead flow.

#### MOBILE APPLICATION DEVELOPMENT

We develop comprehensive services for mobile application development for all main platforms.

We are committed to the success of your company. From a good architecture, to clean code, we value practical solutions that look beautiful, are intelligently designed, and provide a great end-user experience.

#### MAINTAIN AND MODERNIZE YOUR LEGACY APPLICATIONS

The lack of up-to-date documentation and knowledgeable engineers can make legacy systems expensive to maintain. At MOWEDE, we strike to make it affordable to modernize your legacy applications for today's needs. We can extend and repurpose just about any legacy application to web or mobile devices, and provide standard-based APIs to keep pace with today's needs.

Our expert staff, can maintain and improve operation efficiency- all while minimizing the costs of legacy application modernization.

#### BLOCKCHAIN & DAPP DEVELOPMENT

Blockchain technology and Cryptocurrency now play a crucial role in the vast world of internet. Although this popular technology is not a silver bullet for all problems, Blockchain is considered to be the backbone of various promising applications in financial technology, logistics, healthcare, governments and more.
